

Project SEARCH® at Northwestern Medicine Delnor Hospital

Project SEARCH is a dedicated program focused on providing continuing education and training to young adults with intellectual and developmental disabilities. This is accomplished through an innovative workforce and career development model that benefits the individual, workplace, and community.

Through a non-paid internship format, this nine-month program hosted by Northwestern Medicine Delnor Hospital begins November 6, 2017, is geared towards 10-12 young adults between the ages of 18 and 24 who have received a high school diploma prior to the program start date.

To further enhance the intern's total immersion in the workplace, there is dedicated Project SEARCH learning center lead by a special education instructor and supported by on-site skills trainers. Participants take part in three, 10-week internships exploring a variety of career paths while learning transferable job skills for industries within and outside of healthcare.

Our primary goal is to prepare each intern for competitive employment upon completion of this skill building experience.
